## Database Schema

Database: group2\_cavair\_db

Tables:

1. users

- user\_id (PK)
- full\_name
- email (UNIQUE)
- password
- phone
- created\_at

2. admins

- admin\_id (PK)
- username (UNIQUE)
- password

3. flights

- flight\_id (PK)
- flight\_number (UNIQUE)
- origin
- destination
- type (Domestic/International)
- price

4. flight\_schedules

- schedule\_id (PK)
- flight\_id (FK)
- frequency
- departure\_date
- departure\_time
- arrival\_time

5. bookings
- booking\_id (PK)

- user\_id (FK)

- schedule\_id (FK)

- flight\_number (FK)

- service\_type

- class\_type

- num\_passengers

- amount

- id\_file\_path

- booking\_status

- booking\_date

- is\_round\_trip

- return\_date

## File Dependencies

### Frontend Dependencies

- Google Maps API
- Font Awesome
- Custom CSS and JavaScript

### Backend Dependencies

- PHP 7.4+
- MySQL 8.0+
- PDO Extension
- GD Library for image processing

Note: This schema provides a comprehensive overview of the file structure and relationships within the CAVAIR system. All paths are relative to the project root directory.
